

AMENDMENTS TO THE SPECIFICATION

Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

The invention provides a suction-cleansing device that is capable of forming a swirling stream at a position close to skin and has both a cleansing and a massaging effect by adequately maintaining a state of minute air bubbles in the stream of water, comprising a vessel body having a hollow portion converging from the rear part side thereof toward the front part side thereof, an air/liquid jetting port secured at the front end portion of the vessel body, a liquid-introducing pipe 4 connected to the circumferential wall at the rear part side of the vessel body in the tangential direction, and an air/liquid jet-guiding portion that is disposed at the outer circumferential portion of the air/liquid jetting port and is widened to open from the air/liquid jetting port toward the jetting direction.
